

BHARATH NALLAMOTHU

Principal AI Engineer

Plano, TX | +1 (602) 582-2722 | bharath.nallamothu@gmail.com | [LinkedIn](#) | iambharath.dev | [GitHub](#)

PROFESSIONAL SUMMARY

Principal AI Engineer and former Verizon engineer with 11+ years of experience delivering production software using Python, LangGraph, agentic AI, LLM applications, RAG, APIs, and cloud platforms. Core contributor to enterprise AI products for Toyota Motor North America, including multi-agent research, manufacturing troubleshooting, model and tool orchestration, retrieval, memory, and citation-backed workflows.

TECHNICAL SKILLS

Agentic AI: Python, FastAPI, LangChain, LangGraph, LLMs, RAG, multi-agent workflows, tool calling, prompt engineering and optimization, context and memory management, human-in-the-loop workflows

Retrieval and APIs: OpenSearch, vector databases, semantic and hybrid search, metadata filtering, retrieval evaluation, REST APIs, GraphQL, Apollo, Text-to-SQL, PostgreSQL, MongoDB, Redis

Engineering and Cloud: TypeScript, Node.js, Express.js, React, React Native, Redux, D3.js, AWS, Docker, OpenShift, NGINX, Jenkins, GitHub Actions, Jest

PROFESSIONAL EXPERIENCE

Principal AI Engineer | Toyota Motor North America

Feb 2024 - Present

- Build Python services, agent workflows, retrieval pipelines, tool integrations, and production user experiences across TMNA Generative AI products; contribute to prompt optimization, evaluation, testing, code reviews, retries, fallbacks, and human-in-the-loop controls.
- **GearPal:** Co-developed an agentic RAG troubleshooting assistant with permission-aware OpenSearch routing, hybrid and vector retrieval, metadata filters, API/tool integration, and confidence-based fallback. The team platform supports 20 shops across 7 North American plants and 1,300+ maintenance professionals.
- **ToyotaGPT:** Implemented LangGraph workflows for conditional execution, model and tool selection, structured responses, conversation memory, session restoration, history retrieval, and reusable application integrations.
- **MaterialGPT:** Co-developed multi-agent RAG research across service reports, ANSYS data, technical documentation, and PostgreSQL Text-to-SQL using planning, specialist agents, follow-ups, and citation-backed synthesis. The team platform serves 1,000+ users and reduced initial research discovery from 4-5 days to minutes.
- **BatteryBrainGPT:** Built retrieval and LLM orchestration for a battery engineering assistant connecting technical knowledge sources and APIs for diagnostics, research, and troubleshooting.

Full Stack Developer | Verizon

Oct 2022 - Feb 2024

- Designed TypeScript and Node.js microservices using Express.js, PostgreSQL, REST APIs, GraphQL, Apollo, and NGINX; supported OAuth 2.0, Dockerized AWS deployments, OpenShift, and Jenkins CI/CD.
- Built React and TypeScript applications with Redux, API integrations, reusable components, code reviews, and Jest/React Testing Library tests.

ADDITIONAL EXPERIENCE

- **Novartis** - Sr Software Developer (Oct 2020 - Oct 2022): Delivered React applications backed by Node.js, GraphQL/Apollo, REST APIs, Jest, AWS, and Docker.
- **Study Monitor** - Sr Software Engineer - Lead (May 2018 - Oct 2020): Led React and React Native delivery using Redux, Node.js/LoopBack, MongoDB, AWS, REST APIs, and automated testing.
- **LivBIM** - Software Developer (Apr 2017 - May 2018): Built Angular and Node.js/LoopBack applications, reusable components, WebSocket-driven experiences, and AWS-hosted services.
- **YITSOL** - Software Developer (Sep 2015 - Apr 2017): Developed React, AngularJS, JavaScript, Node.js, and REST-based interfaces deployed with Docker, OpenShift, and AWS.
- **CMC, A TATA Enterprise** - IT Engineer (Jun 2014 - Sep 2015): Built MVC web interfaces using HTML, CSS, JavaScript, jQuery, JSON, and AJAX.

EDUCATION

Bachelor's Degree | Jawaharlal Nehru Technological University
